

**HUNDEGGER
ANNOUNCE OPENING
OF SNETTERTON SERVICE CENTRE**

Hundegger UK is pleased to announce the opening of its New UK service centre in Snetterton Norfolk. The service centre is the first step to support Hundegger’s many UK customers on a local level with the supply of parts and services.

Daniel Blades has been appointed the Managing Director of Hundegger UK and said: “I am excited to be part of the continued growth of Hundegger. Hundegger have always offered machines and servicing of a world class standard and I aim to bring the same level of continued commitment and support to our customers both new and old around the UK and Ireland.”

Hundegger has a population of more than 150 machines in the UK and Ireland, in applications from processing cut components for timber roof trusses and timber frame, to I-Joists, glulam, Kerto and many machines installed for the machining of green oak structures.

Chris Osborne Head of Sales for UK and Ireland added: “Hundegger have had a remarkable run of sales since the beginning of 2020 confirming more than 80 machines throughout the UK and Ireland in this time. Many users are now owning multiple machines in their networks. This is some testimony to Hundegger technology and the positive difference we are making to our customer’s businesses.”

Hundegger are happy to show potential customers how the Hundegger Cambium software can present real life results from their production files. The results will provide the volume of material to be used, time taken and importantly with high timber prices, the % of waste and timber yield, and how the number of timber lengths will be reduced - all powerful information to understand how your timber cutting is performing.
